

# GLOBAL WARMING POLL

## STANFORD UNIVERSITY

Conducted by GfK Roper Public Affairs & Corporate Communications

*Interview dates: June 1 – June 7, 2010*

*Interviews: 1,000 adults*

*Margin of error: +/- 4.4 percentage points at the 95% confidence level*

*NOTE: All results show percentages among all respondents, unless otherwise labeled.*

*Please refer to the exact sample number at the bottom of each table.*

*All results shown are percentages unless otherwise labeled.*

## SELECTED RESULTS

RELEASED JUNE 9, 2010

Q12. You may have heard about the idea that the world's temperature may have been going up slowly over the past 100 years. What is your personal opinion on this - do you think this has probably been happening, or do you think it probably has not been happening?

## **Stanford Global Warming Poll Method**

The Stanford Global Warming Poll was conducted by GfK Roper Public Affairs & Corporate Communications – a division of GfK Custom Research North America – for Stanford University. This telephone poll is based on a nationally-representative probability sample of 1,000 adults age 18 or older. The interviews were conducted June 1<sup>st</sup> – June 7<sup>th</sup>, 2010, with 699 respondents on landlines and 301 on cellular telephones. Both the landline and cell phone samples were provided by Survey Sampling International. The survey sample included the contiguous 48 states, Alaska and Hawaii. Interviews were conducted in both English and Spanish.

The combined landline and cell phone data were weighted to account for probabilities of selection, as well as age, sex, education and race, using targets from the March 2009 supplement of the Current Population Survey. In addition to these factors, the weighting takes into account the patterns of land and cell phone usage by region from the 2009 Fall estimates provided by Mediamark Research Inc.

The margin of sampling error is plus or minus 4.4 percentage points at the 95% confidence level, for results based on the entire sample of adults. The margin of sampling error is higher and varies for results based on sub-samples. In our reporting of the findings, percentage points are rounded off to the nearest whole number. As a result, percentages in a given table column may 1,000 slightly higher or lower than 100%. In questions that permit multiple responses, columns may 1,000 significantly more than 100%, depending on the number of different responses offered by each respondent.

This survey was designed by Professor Jon Krosnick and Ana Villar and was sponsored by the Woods Institute for the Environment at Stanford University and by a grant from the National Science Foundation.
